## DETAILED ACTION

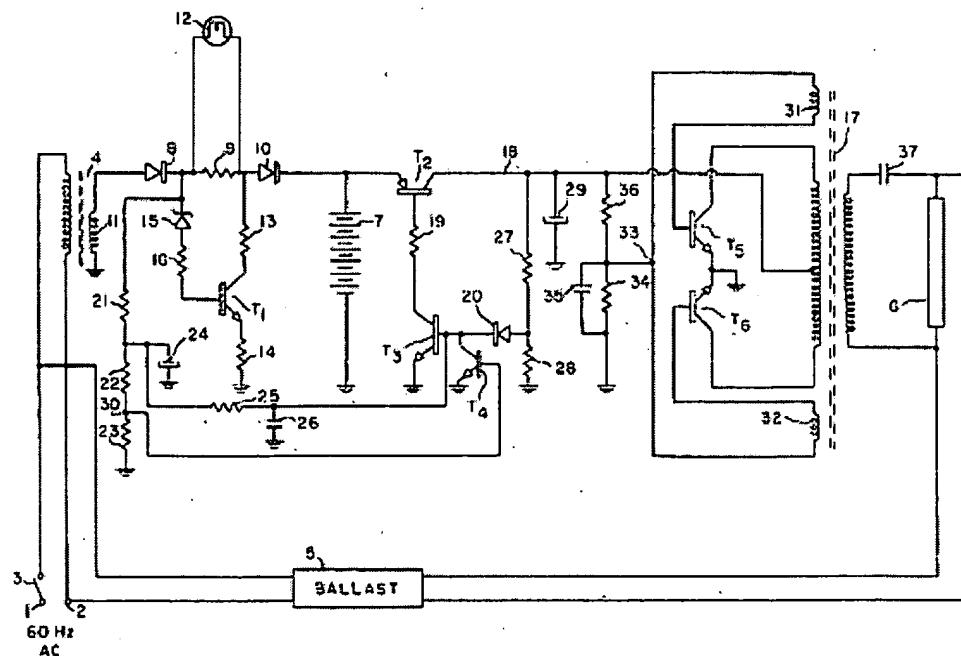

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 5 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by Patel (USP 3,833,817) Patel discloses a ballast circuit a split mode operation an inverter and a direct converter wherein the line voltage and current are controlled to provide a substantially square wave voltage and current output. See figure 1, below.

The circuit operates as a rectifier when AC power (3,2) is provided and acts as an inverter when battery power (7) is provided and provides a substantially square wave output. See column 4, last paragraph.

### ***Response to Arguments***

3. Applicant's arguments filed 9-29-05 have been fully considered but they are not persuasive.

4. In response to applicant's arguments, the recitation HMI ballast has not been given patentable weight because the recitation occurs in the preamble. A preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. See *In re Hirao*, 535 F.2d 67, 190 USPQ 15 (CCPA 1976) and *Kropa v. Robie*, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951). It is noted that the cited patent is related art in the field of ballast lamp circuitry.

5. In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., single common converter) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993). It is noted that the prior art does disclose a split operation it operates as both an inverter and a direct converter dependent on the power supplied.
